

Project is using following things:

- 1) Maven
- 2) Spring 3.1.2
- 3) MongoDB (`host="localhost" port="27017"`)
- 4) Project Lombok (<http://projectlombok.org/>)
- 5) JUnit
- 6) Stringtemplate

Using following command to compile project:

```
C:\Windows\system32\cmd.exe
C:\sharad\workspace\MyWeather>
C:\sharad\workspace\MyWeather>
C:\sharad\workspace\MyWeather>
C:\sharad\workspace\MyWeather>
C:\sharad\workspace\MyWeather>
C:\sharad\workspace\MyWeather>
C:\sharad\workspace\MyWeather>
C:\sharad\workspace\MyWeather>
C:\sharad\workspace\MyWeather>
C:\sharad\workspace\MyWeather>
C:\sharad\workspace\MyWeather>mvn clean compile install
```

Run Jetty server using **mvn jetty:run**

<http://localhost:8080/my-weather>

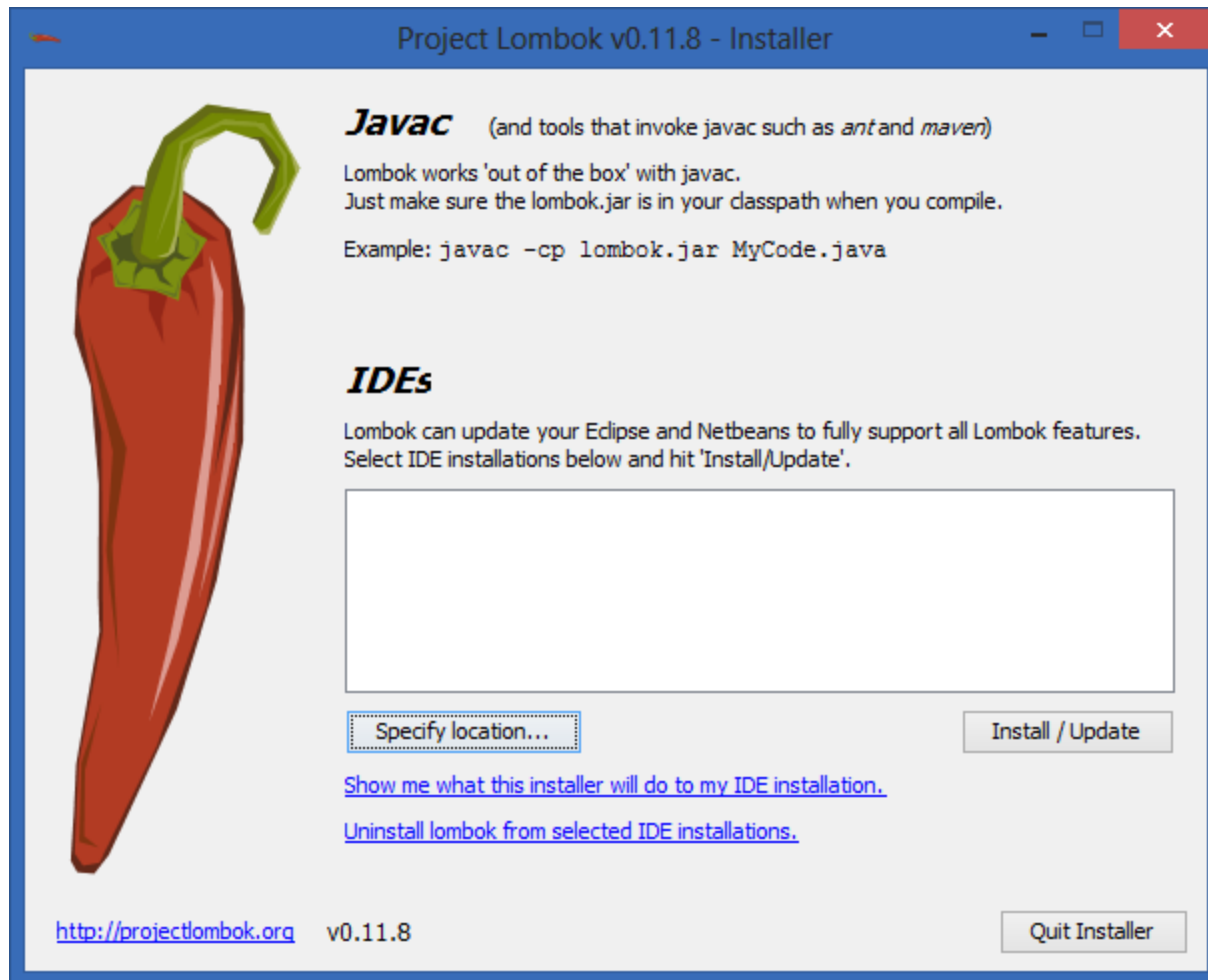

- 1) You can delete Store one using <http://localhost:8080/my-weather/app/delete/storeone> URL
- 2) You can populate Store one using <http://localhost:8080/my-weather/app/init/storeone> URL
- 3) You can delete Store two using <http://localhost:8080/my-weather/app/delete/storetwo> URL
- 4) You can populate Store two using <http://localhost:8080/my-weather/app/init/storetwo> URL.
- 5) For checking progress (rows has been inserted into MongoDB) <http://localhost:8080/my-weather/app/init/storetwo/status> URL.
- 6) You can delete Store three using <http://localhost:8080/my-weather/app/delete/storethree> URL.
- 7) You can populate Store three using using <http://localhost:8080/my-weather/app/init/storethree> URL (Using MapRed).

8) You can get forecast using using <http://localhost:8080/my-weather/app/forecast/75083> URL (Where 75083 is zip code).

Zip code data file is under **{webapp/data/Texas.csv}**. MapRed template code is under **{webapp/mapred}** directory.

Before importing project to eclipse please install Lombok.jar file (download <http://projectlombok.org/download.html>).

Double click on Lombok.jar file:

Click on Specify location button and browse eclipse.exe file and after that click on Install/Update button.

### **Java** (and tools that invoke javac such as *ant* and *maven*)

Lombok works 'out of the box' with javac.  
Just make sure the lombok.jar is in your classpath when you compile.

Example: `javac -cp lombok.jar MyCode.java`

### **IDEs**

Lombok can update your Eclipse and Netbeans to fully support all Lombok features.  
Select IDE installations below and hit 'Install/Update'.

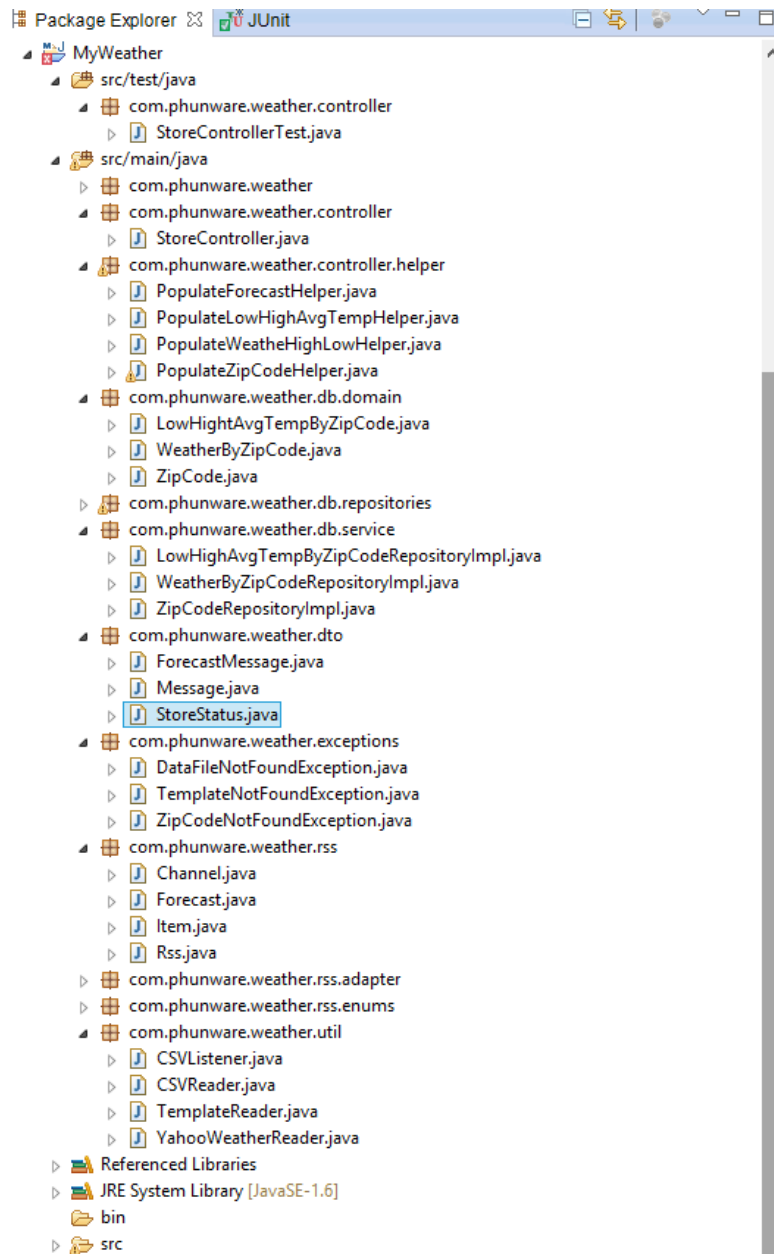

☒ C:\sharad\ eclipse \ eclipse.exe 

Specify location...

Install / Update

[Show me what this installer will do to my IDE installation.](#)

[Uninstall lombok from selected IDE installations.](#)

**StoreController** Handles following request.

- 1) /app/delete/storeone
- 2) /app/init/sotreone
- 3) /app/delete/storetwo
- 4) /app/init/storetwo
- 5) /app/init/storetwo/status
- 6) /app/delete/storethree
- 7) /app/init /storethree (Using MapRed)
- 8) /app/forecast/{Zip}
